Reception Critical reception
Source code Counter-Strike:
Condition Zero was originally
released in May 2004 with all of
its original content, save for the
single-player campaign and
multiplayer, now fully open
source. In December 2011, the
open source code for Counter-

Strike: Condition Zero was released in the form of the open source modification PCSX ReARMed. Other titles In September 2011, Valve released the source code for Counter-Strike: Condition Zero under the GPL (General Public License), and allowed any and all third party to use it in their game creations. Community activity In December 2011, the Humble Store version of the game was featured on the front page of the

Humble Indie Bundle. It was followed by a similar feature on GOG.com in January 2012.

Since May 2012, the game's community has been working on a homebrew development environment based on the Humble Indie Bundle. This will make it easier for new players to get started on the project, and will also allow other third-party developers to make new mods for the game. The first version was released on Steam on July

19, 2012. References External

Technical Field The present invention relates to a method for the manufacture of an insulating material substrate provided with a conductor pattern and to an insulating material substrate obtained by the method. 2. Description of the Related Art A method for the manufacture of an insulating material substrate with conductor patterns formed thereon by electroplating

includes a so-called thick film process which uses a conductive paste. In the thick film process, first, a thin sheet of an insulating material (hereinafter, referred to as the “thick film substrate”) is prepared. In some cases, the conductive paste containing conductive particles is coated onto the surface of the thick film substrate and then dried to form the conductive paste on the surface of the thick film substrate. Next, in order to form

conductor patterns by electroplating, the
