A major strength of this bookkeeping program is the combination of standard user interface and enhanced features which include advanced search, editable field validation, and macro commands. In addition to the basic bookkeeping features (Edit, Print, Export, Online Order and View), you can search for books using exact or partial text on the ISBN, Title, Author, Subtitle, Publisher, Series, Series Number, and Condition, as well as the Bookstore, and Copies. A visual comparison of the most important filters is available in the View feature. You can compare all the variables and the fields are editable. After search or book view is complete, a list of available books is displayed in the Book Table. This enables you to remove all books that are out of date, which has no effect on the actual amount of space on the hard disk. The program provides the necessary power and functionality to create and maintain a sophisticated library system. Price: The price depends on the volume of data to be entered.
